

# Local Settings

**Default language** defines the language for all users in a specific CAE LearningSpace system. However, individual users can change the language for their user profile via the **User account settings** (top right corner).

The **System time** is the CAE LearningSpace server time, not the time of the workstation computer.

**TIP:** If your location is not listed, select a location that is in the same time zone and that shares the annual time changes.

The screenshot shows the 'Local Settings' window in the CAE LearningSpace Experience application. The window title is 'CAELearningSpaceExperience' and the user is logged in as 'Admin'. The 'Local Settings' tab is active, showing the following configuration options:

- System time: 1:54:25 pm
- Default language: English
- Location region: Europe
- Location city: Budapest
- Date format: MM/DD/YYYY
- Time format: hh:mm:ss am/pm
- First day of week: Sunday

At the bottom of the window, there are two buttons: 'Save and Exit' and 'Cancel and Exit'.
